

Networking

From the **Remote Service** to the operation and monitoring of the equipment in the Office, with the control and measuring systems of **Sensor Control**, this is possible.

A careful analysis of the measured values in the sand preparation of form of is of increasing importance to our clients. To do this, we have developed a database software stores the data in the and for analysis purposes graphically are prepared.

So, you monitor your process.

With its mobile operation via tablet, they have a comfortable solution for the operation or maintenance of our systems. Employed as a mobile camera, we offer the possibility to present your concern directly to our **Service Staff** in the context of the remote service. This procedure is very successful especially when language barriers.

Data security

Adequate data security is a prerequisite for the storing and working with in-house process information.

Therefore, the data transfer is carried out in your closed intranet or the remote service and the online solution through a closed VPN secure connection.
